Results:
- 10 females and 4 males
- Consanguineous marriages were reported in 10 patients (71.4%).
- Mean age at diagnosis: 9.5 months (min:2 months max:31 months ).
- Current age: median 8,8 years (min: 1,1 year max:18 years)
- The mean annual number of illness episodes was 1,2 (min:0,05 max:5,5)
- The MUT gene mutations detected in all patients. They were vitamin B12 non-responsive.
- The mean annual number of illness episodes was 1,2 (min:0,05 max:5,5).

Discussion:
Nutritional biochemical status, as well as metabolic control, should be carefully monitored to optimize overall health outcomes on MMA patients.
